Maggie successfully completed 2 assignments during her fieldwork rotation to improve her clinical observation and evaluation skills. Maggie has completed the HELP Checklist 0-3 Years, the HELP Checklist 3-6 Years, the Short Sensory Profile, and 4 subtests of the BOT-2 during the course of her fieldwork. She has assessed ROM, strength, coordination, and muscle tone. She has demonstrated improved accuracy in administering and scoring the assessments since midterm. She has shown an ability to identify the patients' functional activity strengths and functional activity limitations. She has demonstrated improved ability to develop treatment strategies to address identified impairments. She has written short term and long term goals within plans of care based on

COMMENT

Great job with evaluations and reassessments!! You were able to adjust your methods to fit the client's abilities/needs, and put them at ease when doing so:)

COMMENT

Great documentation! You are successfully utilizing the BIRP method and thus showing the 'efficacy of your interventions.'

COMMENT

Evaluation skills have greatly improved over the last 12 weeks. This specialty setting can be a challenge given the immense knowledge required of anatomy and biomechanics, paired with numerous protocols to choose from. Maggie uses excellent clinical judgment to select appropriate assessment tools and then translate results into her documentation.
